

TRAN VIET GIA HUY

Ho Chi Minh City, Vietnam (+84) 905566227 Email LinkedIn GitHub

CAREER OBJECTIVE

Data Analyst with a product mindset and strong technical foundation in SQL & Python. Aiming to transform complex data into actionable insights and build reliable data solutions that directly support business growth.

EDUCATION

University of Economics Ho Chi Minh City

Ho Chi Minh City, Vietnam

Bachelor's in Computer Science

2023 – 3/2027

GPA: 3.75/4.0

Languages: IELTS 6.0

Certifications:

- Google Data Analytics Professional Certificate
- Student Scientific Research Award – Eureka Certificate

AWARDS

- Winner of DataVision 2026: Outperformed 250+ teams by architecting a comprehensive e-commerce analytics ecosystem, integrating multi-source data to drive actionable growth and operational strategies.
- Research paper on "Deep Learning-based Signature Forgery Detection for Personal Identity" accepted for publication in NCTD 2025 International Scientific Conference.
- Awarded 4 times UEH Academic Scholarships.
- Won 2nd Prize in BIT Genesis 2025 Scientific Research Competition.

EXPERIENCE

Project Leader (Vietnam)

03/2026 – Present

Mr. Steve Wong — Director of Corporate Finance

D: + 852 2836 2829

Email: steve Wong@EmperorGroup.com

- Led a cross-functional team (Business, Legal, and Engineering) to develop and implement a proprietary technology governance framework successfully.
- Coordinated the entire project lifecycle, acting as a strategic bridge between local operations and the Hong Kong management team to ensure seamless implementation and performance synchronization.

Key Achievements:

- Collaborated with two teams (Hong Kong - Vietnam); received praise from the Hong Kong team leader for clarity in cross-functional communication.
- Led the development of a proprietary industry standard by designing engineering blueprints and a globally compliant legal framework.
- Coordinated the unification of multi-functional research directions and managed the entire operational process of the team, achieving 100% strategic alignment with the leadership vision and significantly enhancing research depth.

Undergraduate Research Assistant

UEH

Advisor: Ho Thi Thanh Tuyen

01/2026 – Present

Email: tuyenhtt@ueh.edu.vn

PERSONAL PROJECTS

E-Commerce Data-Driven Optimization & Profitability Pipeline

Python, Power BI, Machine

Learning

- Investigated root causes of shrinking net profit margins despite **23x GMV growth** (2019–2023) by processing **3.35M+ records** across transactions, inventory, behavioral events, and customer data.
- Built a **quantitative ROI model** (Inventory Markdown with ABC-Aging guardrail, LP-based DC Re-balance, OOS Checkout Recovery, RFM K-Means Retention) projecting **\$1.06M–\$1.77M incremental GP** on a \$500K budget with Base ROI 112%–254%, payback 3.4–5.7 months.
- Designed a **hybrid Python + Excel financial engine** with live scenario toggling, **13/13 internal consistency checks**, and proxy root-cause analysis identifying **\$1.44M status leakage (93.3% of**

total) from checkout friction to directly inform budget allocation decisions.

Office Furniture E-Commerce Sales & Operations Analytics *Power BI, Data Modeling, DAX*

- Investigated revenue drivers and logistics bottlenecks across a multi-table database to resolve fulfillment delays and optimize product-level profitability.
- Engineered an optimized **Star Schema** integrating 5 core business entities (Orders, Customers, Products, Shipping, Payments) and formulated **30+ DAX measures** for multidimensional analysis.
- Built a dashboard synthesizing **15+ operational KPIs**, uncovering fulfillment bottlenecks to reduce late shipment rates by **18%** and formulating cross-selling strategies projected to boost Average Order Value (AOV) by **12%**.

End-to-End Data Warehouse Implementation *SQL Server, ETL, Data Modeling*

- Resolved data fragmentation across heterogeneous CRM/ERP systems to enable unified, data-driven decision-making
- Architected a scalable **3-layer Medallion architecture** and an optimized **Star Schema**
- Utilized **SQL Server** (Window Functions, CTEs) to engineer automated ETL pipelines, achieving seamless **BI integration**

RESEARCH & PRACTICAL EXPERIENCE

Janus BI – Multi-Agent Business Intelligence PPlatform 01/2026 – 03/2026 *LotusHacks 2026* *FastAPI, Next.js, AWS, dbt, PostgreSQL*

- Architected a SaaS-ready **multi-agent AI platform** enabling **LLM-based Text-to-SQL** workflows and real-time SSE streaming, designing a **Zero Data Lake architecture** (PostgreSQL, dbt) for efficient in-database transformations and deploying scalable Dockerized microservices on **AWS (EC2, ECR)** via robust CI/CD pipelines.

Automated Signature Forgery Detection System 04/2025 – Present *Leader & Principal Researcher* *Python, PyTorch, YOLOv10, OpenCV* *Advisor: Hoang Anh*

- Architected an **Adaptive Meta-Learning Framework** integrating Triplet Siamese and Relation Networks via **YOLOv10** to resolve **few-shot offline signature verification** across heterogeneous datasets (BHSig, CEDAR), engineering an end-to-end pipeline that achieved superior cross-dataset generalization (**EER, AUC**).

SKILLS

SQL: Advanced querying, Window Functions, CTEs, Subqueries, Stored Procedures, Triggers

Programming & Processing: Python, PySpark

Data Workflow & Visualization: dbt, Power BI, Excel

Databases: MySQL, SQL Server, PostgreSQL, MongoDB

LLMs & RAG: OpenAI API, LangChain, Prompt Engineering, RAG Pipelines

Cloud & DevOps: AWS, Git, Docker

AI/ML: PyTorch, TensorFlow/Keras, OpenCV, HuggingFace Transformers
